Application No. 10/524,065 Amendment dated May 7, 2010 Reply to Office Action of December 10, 2009

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-7. (Canceled)

- (Previously presented) The external patch according to claim 10 or 11, wherein the flexible film is low density polyethylene film.
- 9. (Currently amended) The external patch according to claim 10 or 11, wherein the pressure-sensitive adhesive is a the acrylic component of the acrylic pressure-sensitive adhesive emprising at is selected from least one of the following compounds: 2-ethylhexyl acrylate, acrylic acid, ethyl acrylate, vinyl acetate, and an acrylic ester.
- 10. (Currently amended) An external patch comprising a backing and a pressure-sensitive adhesive layer, wherein the backing is a laminate structure comprising a flexible film as an outer layer and a drug non-adsorptive layer, wherein said flexible film has a thickness of 1 to 200μm and is selected from at least one of the group consisting of woven fabrics, non-woven fabrics and polymer films; wherein said drug non-adsorptive layer has a thickness of 0.1 to 10μm and is a polyethylene terephthalate film; and wherein said pressure-sensitive adhesive layer is made of an acrylic pressure-sensitive adhesive layer being adjacent to said drug non-adsorptive layer and not adjacent to the flexible film, wherein the adhesive layer further comprises:
 - 0.01 to 1% by weight of an isocyanate-based crosslinking agent;
- 0.5 to 10% by weight of estradiol and/or a derivative of estradiol as an active ingredient:
 - 0.5 to 10% by weight of crotamiton; and

0.1 to 10% by weight of oleic acid.

11. (Currently amended) An external patch comprising a backing and a pressure-sensitive adhesive layer, wherein the backing is a laminate structure comprising a flexible film as an outer layer and a drug non-adsorptive layer, wherein said flexible film has a thickness of 1 to 200μm and is selected from at least one of the group consisting of woven fabrics, non-woven fabrics and polymer films; wherein said drug non-adsorptive layer has a thickness of 0.1 to 10μm and is a polyethylene terephthalate film, said pressure-sensitive adhesive layer being adjacent to said drug non-adsorptive layer and not adjacent to the flexible film; and wherein said pressure-sensitive adhesive layer is made of an acrylic pressure-sensitive adhesive, wherein the adhesive layer further comprises:

- 0.01 to 1% by weight of an isocyanate-based crosslinking agent;
- 1 to 30% by weight of isopropyl myristate as a distribution coefficient control agent; and
- 0.5 to 10% by weight of norethisterone and/or a derivative of nonethisterone as an active ingredient.
- 12. (New) An external patch comprising a backing and a pressure-sensitive adhesive layer, wherein the backing is a laminate structure comprising a low density polyethylene film as an outer layer having a thickness of 1 to 200 µm and a drug non-adsorptive layer, wherein said drug non-adsorptive layer has a thickness of 0.1 to 10 µm and is a polyethylene terephthalate film; and wherein said pressure-sensitive adhesive layer is made of an acrylic pressure-sensitive adhesive, said pressure-sensitive adhesive layer being adjacent to said drug non-adsorptive layer and not adjacent to the flexible film, wherein the adhesive layer consists of:
 - 0.01 to 1% by weight of an isocyanate-based crosslinking agent;
- 0.5 to 10% by weight of estradiol and/or a derivative of estradiol as an active ingredient;
 - 0.5 to 10% by weight of crotamiton; and
 - 0.1 to 10% by weight of oleic acid.

13. (New) An external patch comprising a backing and a pressure-sensitive adhesive layer, wherein the backing is a laminate structure comprising a low density polyethylene film as an outer layer having a thickness of 1 to 200µm and a drug non-adsorptive layer, wherein said drug non-adsorptive layer has a thickness of 0.1 to 10µm and is a polyethylene terephthalate film, and wherein said pressure-sensitive adhesive layer being adjacent to said drug non-adsorptive layer and not adjacent to the flexible film; and wherein said pressure-sensitive adhesive layer is made of an acrylic pressure-sensitive adhesive, wherein the adhesive layer consists of:

0.01 to 1% by weight of an isocyanate-based crosslinking agent:

I to 30% by weight of isopropyl myristate as a distribution coefficient control agent; and

0.5 to 10% by weight of norethisterone and/or a derivative of nonethisterone as an active ingredient.

14. (New) An external patch for application to a skin surface consisting of:

 a) a low density polyethylene film as an outermost layer, which is oriented farthest from the skin surface when applied to the skin surface, wherein said flexible film has a thickness of 1 to 200um;

b) a drug non-adsorptive as a layer adjacent to the flexible film layer, wherein said drug non-adsorptive layer has a thickness of 0.1 to 10μm and is a polyethylene terephthalate film:

c) a pressure-sensitive adhesive layer adjacent to the drug non-adsorptive layer and not adjacent to the flexible film, wherein the adhesive layer consists of

0.01 to 1% by weight of an isocyanate-based crosslinking agent.

0.5 to 10% by weight of estradiol and/or a derivative of estradiol as an active ingredient,

0.5 to 10% by weight of crotamiton, and

0.1 to 10% by weight of oleic acid; and

- d) a release layer adjacent to the pressure-sensitive adhesive layer and next to the skin surface when applied to the skin surface.
 - 15. (New) An external patch for application to a skin surface consisting of :
- a) a low density polyethylene film as an outermost layer, which is oriented farthest from the skin surface when applied to the skin surface, wherein said flexible film has a thickness of 1 to 200um;
- b) a drug non-adsorptive as a layer adjacent to the flexible film layer, wherein said drug non-adsorptive layer has a thickness of 0.1 to $10\mu m$ and is a polyethylene terephthalate film:
- c) a pressure-sensitive adhesive layer adjacent to the drug non-adsorptive layer and not adjacent to the flexible film, wherein the adhesive layer consists of
 - 0.01 to 1% by weight of an isocyanate-based crosslinking agent;
 - I to 30% by weight of isopropyl myristate as a distribution coefficient control agent, and
 - 0.5 to 10% by weight of norethisterone and/or a derivative of nonethisterone as an active ingredient; and
- d) a release layer adjacent to the pressure-sensitive adhesive layer and next to the skin surface when applied to the skin surface.
